Sometimes	**Always**	**Never**
A quadrilateral is a rectangle.	A square is a rhombus.	A rectangle has 2 acute angles.
A diagonal of a parallelogram bisects the opposite angles.	A rectangle is a parallelogram.	A rectangle has only one right angle.
A parallelogram has perpendicular diagonals.	A pentagon has 72° rotational symmetry.	A triangle is a quadrilateral.
A rectangle has 4 congruent sides.	A square has two pairs of opposite sides parallel.	A parallelogram has no congruent angles.
A rhombus has congruent diagonals.	A square is a quadrilateral.	The diagonals of a square meet at a 45 degree angle.
A rectangle has perpendicular diagonals.	A square is a rectangle.	The rectangle has one line of symmetry.
A parallelogram has 4 right angles.	A parallelogram is a quadrilateral.	A hexagon is a quadrilateral.
A rectangle is a square.	A rhombus has angles that add to 360 degrees.	
A rhombus is a rectangle.	The diagonals of a rhombus divide it into 4 congruent right triangles.	
A quadrilateral is a square.	The opposite angles of a rectangle are supplementary.
