

Frequently asked questions by parents regarding Privacy...

What is Healthy Roster: Healthy Roster is an app used by Certified Athletic Trainers to log, track and communicate about athlete injuries.

Healthy Roster is HIPAA Compliant: That means all personal health information (PHI) is stored securely.

Who has access to my child's profile: Until a parent signs up for Healthy Roster, only the Certified Athletic Trainer has access to the athlete's profile.

What happens once a parent signs up: After a parent signs up to Healthy Roster, they have control of who else can access the athlete's profile. A parent can allow coaches access to injury information (recommended) and invite other medical providers such as their primary care physician.

Can users of Healthy Roster share my child's injury information to recruiters or other people who do not have access?

Absolutely not! You control who has access to your child.

What happens to my child's information when they graduate?

The athlete's information is archived and the medical record is kept on a secure server.
